Assembly instructions and important information SF 28

Technical details:

Power supply: 110-240 V / 50-60 Hz Maximum wattage (thermal): Recommended bulbs: <u>Note:</u> Bulb socket: E27

Protection class: I 60 W energy-saving bulb 11 W

This specified maximum wattage applies to conventional bulbs. Since these have however been off the market since 01.09.2009, we recommend energy-saving bulbs with about 1/5 of the specified wattage. Halogen bulbs are not suitable because these become much hotter than conventional bulbs.

Safety instructions:

- Never cover the luminaire with a cloth fire hazard!
- Always ensure that the plug is removed from the socket before working on the luminaire or changing the bulb.
- Have repair work performed only by an authorized electrician, because electrical power can cause severe injuries!
- Some of the lamp components may get very hot in operation! Avoid skin contact with these components to prevent burns.

Care of lamp:

Use a standard commercial cleaner for the opal-glass.

Please do not use a cleaning agent to clean the painted parts — only use a damp cloth. For the chrome plated parts use a chrome polish.

Glass ball:

The glass ball is flashed-opal and mouth-blown in one piece by means of a glass-blower's pipe. Some surface unevenness and small air bubbles are normal and do not impair the illumination quality.

Mounting the glass shade:

- Screw the sleeve below the glass support down clockwise as far as possible.
- The cap is then loose and there is a gap to the notch.
- Insert the notch into the opening of the opal glass.
- Screw the sleeve upward again, so that the glass is retained between the cap and the notch.
- Put the anti-glare cap on and bring it into the desired position.
