Assembly instructions and important information WNL 30

Technical details:

Power supply: 110-240 V / 50-60 Hz

Bulb socket: E27

Protection class: II

Maximum wattage (thermal):

60 W

Recommended bulbs:

energy-saving bulb 11 W

Note:

This specified maximum wattage applies to conventional bulbs. Since these have however been off the market since 01.09.2009, we recommend energy-saving bulbs with about 1/5 of the specified wattage.

Halogen bulbs are not suitable because these become much hotter than conventional bulbs.

Safety instructions:

- Never cover the luminaire with a cloth – fire hazard!
- Always ensure that the plug is removed from the socket before working on the luminaire or changing the bulb.
- Have repair work performed only by an authorized electrician, because electrical power can cause severe injuries!
- Some of the lamp components may get very hot in operation! Avoid skin contact with these components to prevent burns.

Care of lamp:

Use a standard commercial cleaner for the glass cylinder.

In the course of time a silver-colored patina forms on the nickel plated brass parts, which is frequently desired. If you want the surface to retain a glossy nickel-plated finish for reasons of appearance, use a polish without abrasive agents.

Glass cylinder:

In a painstaking process the glass cylinder has been lacquered white on the inside. It is unfortunately impossible to completely avoid some unevenness on the surface. This does not, however, impair the quality of the light.

Mounting the glass:

The glass cylinder is held by two guide rails inside the reflector. Guide the glass in between the guide rails and screw in the screws with a screwdriver **gently without force**.
