

CLASSIC COLLECTION

Our classic collection of optical instruments will allow you to create unique pieces of high conceptual value that are more than just a source of lighting: our models are designed to adapt to different types of use and environment, both indoor and outdoor, capable of creating great artistic installations that enlarge the perception of space. Classic collection is available in two different colors, both inspired by nature. Sunset Red comes from the tone of the sunset and brings the feeling of the sun to your space giving a warm and calming sensation. Deep Blue, inspired by the outer space, creates an optical illusion of depth, adding a cosmic feeling to the surroundings.

HALO ONE

The sun never sets

Halo One is the first and iconic piece derived from the artistic research of Mandalaki and presented for the first time in 2017 at the Rossana Orlandi Gallery. Symbol of the Classic Collection, it features a powder-coated steel floor stand that supports an anodized aluminum optical body carved from a solid plate and a mineral glass lens capable of creating a defined and deep graphic projection. The idea is to create a compact and minimal object with a great installation effect, which can bring into homes new metaphysical world of colors in which to immerse oneself.

HALO EVO 2

A new mind blowing power

Halo Evo 2 is the evolution of the iconic Halo One. With a new generation of high-power LED, reaching twice the lumen value in the same compact design, a new dimmable floor button is integrated, allowing light to be blended as needed. The addition of a flexible head allows different projection compositions and increases the versatility of the product by providing new graphic compositions and lighting setups.

HALO BIG 2

The ultimate Halo experience

The new Halo Big 2 integrates a new generation of power LED that doubles the lumen value compared to the previous version and integrates a new floor dimmable button. The 183cm height allows to create graphic patterns and extend the possible projection surface. Ceiling and walls become immense paintings where artwork is displayed. A powerful tool to create endless compositions and decorate gently the environment with its presence.

HALO GIGA

A new scale

With 2.5x more of power compare to Halo Evo 2 and a new revised optic in 2024, Halo Giga can achieve an even more precise graphic projection up to 10 meters of diameter at night. Carved from a solid plate of aluminum, the body is designed to maximize the spread of the heat in an elegant design. Fill the walls of your space like large canvases on which to project vivid worlds of color, defining surreal dimensions. Halo Giga provides different installation options to suit a range of interior space configurations: the floor version and the ceiling version for outstanding suspended installations. (Halo Giga is available also for outdoor installations).

HALO MINI

A bright friend

Halo Mini was born with the intention of creating an easily movable product capable of adapting to any type of environment. Thanks to its compact size, its strength and its lightness it will be easy to transport and its integrated dimmer will allow you to have the perfect light intensity according to the place or needs: in the bedroom or living room, in the kitchen or straight into your backpack, from now on the Halo Mini will always be with you.

HALO SKY

Architectural Sun

Halo Sky is a ceiling optical instrument with enhanced LED light, an articulated head and rod. The object is designed for architectural projects or site specific installations. The steam length is fully customizable according to the architecture of the space.

HALO LINE

Vertical Elegance

Halo Line is the newest addition to the Halo family, along with Giga. Its sophisticated linear optic and light diffuser create an entirely different design element allowing unique installation and geometry composition. Halo Line is a monolith of aluminum and glass carved from a solid plate of aluminum. It's an optical system specifically designed to achieve a quality of light that gives the sense of deepens and a fire's warmth. Its inspiration is drawn from archaic elements to reconnect us to our origins.
