

LANDSCAPE COLLECTION

The Halo Landscape collection is an ongoing project based on optical and emotional research.

The idea is to reconstruct breathtaking landscapes through light, as if it were a space-time window that can take us to a specific place at a particular moment in a fraction of time - where colours, sensations and emotions come together defining a unique experience for each of us.

The feeling of a loss of depth, or of succumbing to an experience or an environment are key elements that allow the viewers to detach from the reality that surrounds them, in order to project themselves into a new dimension. We believe that some of the most impactful and effective works of art do not show the viewers how they feel, but rather immerse them in feeling or memory.

HALO HORIZON

A piece of atmosphere

Halo Horizon is the first model of a long series to come from the Landscape collection. It takes us back to a specific moment in which, on the border between earth and space, day and night meet for a few moments, giving us a breathtaking landscape.

Halo Horizon recreates that luminous phenomenon that occurs in nature, where light bent by gravity and scattered in billions of particles in the atmosphere becomes visible in the form of colour and shades opening a space-time window overlooking our planet, and which is directly beamed into your home.

HALO VICE

A new Energy

When the sun is low on the Horizon, sunlight passes through more air and sometimes can be influenced by water droplets, clouds or particles of volcanic origin producing a stunning pinkish color, often preceded by a yellow arch hugging the horizon.

Halo Vice wants to reproduce this natural phenomenon that may appear above the highest clouds in the hour of fading twilight or be reflected off high snowfields in mountainous regions long after sunset.

An integrated dimmer will allow you to have the perfect light intensity according to the place or needs.
